VestasOnline

VestasOnline is a comprehensive **self-service platform** for Vestas customers and prospects, designed to simplify **turbine fleet management** by providing secure access to documentation and remote turbine-specific services — empowering you to focus on what truly matters: generating clean energy.

Service Schedule	The Service Schedule application provides you real time information on upcoming service visits, from initial planning to job completion (when the Service Order report is made available).
Service Order Reports	The Service Order Reports application is where you find and download the Service Order Reports, i.e. the recap document created after the service team has completed the service visit.
Blade Asset Managment	The Blade Asset Management application helps you as a turbine owner by providing insights into the condition of your blades (types and damage severity) for you to best plan maintenance and repair activities.
Invoices	The Invoices application enables you to manage all the invoices issued by Vestas to your company. The advanced search options help you get an overview of invoices with reference to specific contract, sales or service order.
Technical Library (Safety Alerts)	The Technical Library application enables you to stay informed about Safety Alerts for each turbine in a power plant. In this way, we ensure transparency in the communication of safety risks.
Project Planning Portal	The Project Planning Portal enables you, as potential or existing customer to easily download the latest technical sales documentation necessary for new site development activities.
Workspaces	The Workspaces application gives you access to a site and project-specific collaboration platform where you can share information, files and discussion topics with the member of your organisation and the Vestas team. All important files and information are grouped by site or project in one place.
Online Customer Support	The Support Tickets application enables you to easily submit new support tickets, as well as get an overview of ticket status and resolution progress. In this way, you do not spend time on the telephone with the support team, while at the same time managing technical issues in the smoothest way possible.

Wind. It means the world to us.™
